

### A clear picture of your drinking water

The Optimixx® is ideal for keeping a simple visual check of the drinking water pipework and thus gaining a clear picture of the degree of contamination. The Optimixx® allows you to actually see what is happening in the pipework. The material of the Optimixx® has a slightly coarse structure, to which **contaminants and biofilm** stick quicker than other surfaces. This simple **visual control** now makes it possible to **get a clear picture of your animals' drinking water quality**, and do so quickly.

### The solution for clogged drinking nipple prevention

**Contamination** in the drinking water supply is often **difficult to see**. Usually you only discover it when **drinking nipples are already clogged** and the animals already lack clean drinking water. This is not only very bad for animal health; it also costs a **lot of time and energy** to resolve. The old saying applies very well here too: 'Prevention is better than cure' and the **solution** is simple, the Optimixx®!

### Mix it up!

The Optimixx® also ensures thorough **mixing** of **liquids**. This ensures **optimal distribution** of products in the drinking water and therefore all animals receive an equal amount of additives. The Optimixx® comes equipped with a 3-part coupling on both sides, which makes disassembly and cleaning easy.
